

Buzz Bucker

Part of the Match Master Series

The Buzz Bucker is designed to eliminate buzz and hum in an unbalanced line level or instrument level signal. The transformer is a custom bi-filer wound, fully isolated audio transformer, designed for a broad frequency range.

Input/Output: 1/4" phone jack. Tip is signal, ring is common/ground.

The cast aluminum chassis is grounded to the output connector for shielding. If the chassis needs to be grounded to the input ground, the unit can be used backwards due to the bi-filer winding.
